

June 30th Lake Levels  
Jul 03, 2016

Notice: June 30 Lake Level

The gage reading on 30 Jun 16 = 9.6.

June rain was almost twice normal and we are now up to average total precipitation for the year.

All of the boards remain in place despite the level being a half foot above the DNR recommended maximum. Sevastopol is keeping an eye on the weather and boards will be removed if there is a threat of flooding.

We have been getting positive comments and thanks from boaters but CLAA has no control nor much influence over Sevastopol's management of the dam so any thanks should be directed to them.
