

## Lake Safety & Maintenance Committee Report 2020 Annual Meeting

**Donations at the boat ramp** collected \$2134 in 2019. 2020 so far is a few hundred dollars ahead of the 2019.

When the **water level** just reaches the cement at the stake near the end of the first section of dock, the lake level is about 9 which is the highest it should ever get according to the DNR dam permit.

The lake level is monitored when requested or if a significant event but any **concerns should be directed to the Town of Sevastopol.**

Power loading continues to be an issue. This results in a **hole and then a ridge as you progress outward along the ramp.** There is also a horizontal V shape that results in trailers rocking. Last year's all member survey revealed many members found this annoying but most were willing to put up with it the two times a year that they use the ramp.
